Energy Information

Looking for additional ways to save energy this summer? Your laundry room is a great place to start. Wash clothes with cold water, which can cut one load's energy use by more than half. Your washing machine will use the same amount of energy no matter the size of the clothes load, so fill it up when you can.

Check to see if your neighbors are also without power. If they are report the outage. If you cannot determine whether they have power:
Check for a blown fuse or open circuit breaker in your own equipment.
If you determined through steps one and two that the outage is not a problem with your electric system, report the outage by calling **800-282-8610** or online via central.smarthub.coop
ALWAYS STAY AWAY FROM DOWNED POWER LINES

Non-Payment Disconnect Policy

Central Electric has strict policies in place to deal with past due accounts. If you receive a disconnect notice, you must pay the overdue amount or make acceptable payment arrangements before the disconnect date to avoid service disconnection. Once the meter serviceman visits your service location the account will be disconnected. Meter servicemen are not permitted to accept payments in the field.

Once service is disconnected full payment is required to get reconnected; full payment includes:

- charges up to meter reading at time of disconnect,
- associated fees,
- a security deposit.

EXAMPLE BILL

Understanding Your Bill

G&T Charge- Kilowatt-hour charges for the generation and transmission of electricity from an energy supplier to the cooperative distribution system.

Distribution Charge- The cost, per kilowatt-hour, to deliver electricity from the cooperative to a member's home or business.

Base Charge- The costs associated with operating and maintaining our distribution system. If your service is connected to our distribution system you pay this charge even if you do not use any kilowatt hours.

Demand Charge- The costs associated with the rate at which you use energy. Demand represents the greatest amount of energy used in 15-minute intervals during a billing cycle. Demand is measured in kilowatts (kw).
